

Recherches interdisciplinaires sur le présent et le passé de l'Afrique bantouphone

Interdisciplinary research on the present and the past of Bantu-speaking Africa

Prof. Koen Bostoen & Dr. Guy Kouarata

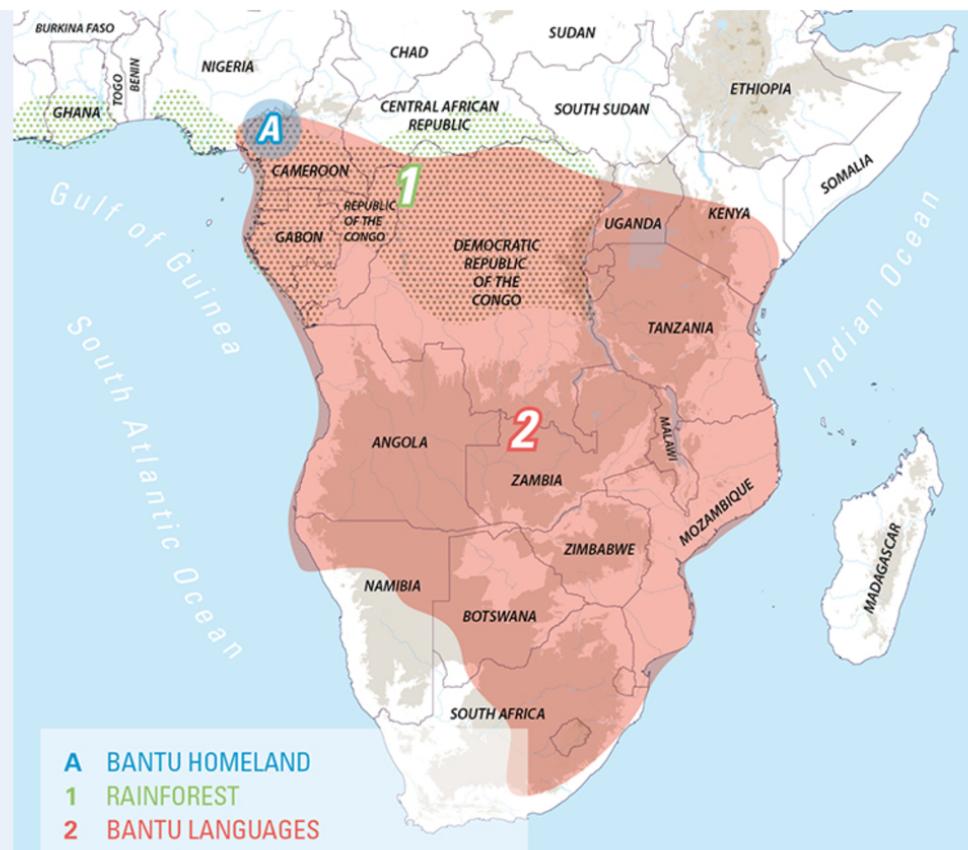

BANTUGENT

The UGent Centre for Bantu Studies (BantUGent) stands for a transdisciplinary approach to the past and present of Bantu languages, Bantu speech communities and their (im)material worlds, both in Africa and in the diaspora.

Our research starts from the **data-driven study of language and/or (im)material culture** and relies on methods and theoretical insights from disciplines as diverse as linguistics, archaeology, anthropology, (art) history, botany, zoology, genetics, etc.

Within the field of Bantu linguistics, which is BantUGent's centre of gravity, we strongly focus on **historical linguistics**, including **language contact**, and **corpus linguistics and lexicography**, which we strive to combine.

Our research is also integrated in several courses of the UGent [BA in African Languages and Cultures](#) and [MA in African Studies](#), such as [Introduction to African Linguistics](#), [Language Documentation and Description in Africa](#), [African Historical Linguistics](#), [Bantu Corpus Linguistics and Lexicography](#), [Comparative Bantu Grammar](#), and [African Archaeology](#).

BantUGent Documentation

BantUGent maintains an extensive digital, searchable inventory with scientific documentation on Bantu language communities. Since we started to accumulate this digital documentation as part of the successive cross-disciplinary [KongoKing](#) (2012-2016) and [BantuFirst](#) (2018-2023) projects, it pertains first and foremost to the **languages, archaeology, botany, ethnography & anthropology, and history of West-Coastal Bantu**-speaking peoples, and more particularly the Kikongo Language Cluster. Nonetheless, because the scope of BantUGent research covers the entire Bantu language distribution area and beyond, the digital inventory increasingly incorporates more documentation from other parts of Africa, including many academic sources that tend to be difficult to access. The contents of our **digital BantUGent documentation inventory** can be consulted [here](#).

Extract from the *Vocabularium Latinum, Hispanicum, e Congense. Ad Usum Missionariorum transmittendorum ad Regni Congo Missiones* from 1652 (Rome: National Central Library, Fundo Minori 1896, MS Varia 274), the oldest surviving dictionary of a Bantu language.

[This unique resource was transcribed using professional dictionary writing software and is, as is the case for all other BantUGent documentation, now available in various digital, searchable formats.]

Map from 1619 by [Jodocus Hondius, Sr.](#) representing Congo and Ethiopia.

[In addition to texts, the BantUGent documentation also includes images of various kinds, such as historical maps, but also pictures from recent research trips. In our Documentation Archive we also keep all the raw material collected via fieldwork.]

Bantu language text corpora

(Historical) Bantu corpus linguistics has recently become one of BantUGent's most visible showcases on the international scene. Following Tognini-Bonelli (2001), corpus linguistics is the analysis and description of language use as documented in texts, including transcribed oral texts. To analyze and describe 'real' language, one needs "large quantities of actual occurrences of that language" assembled in an electronic corpus. Over the past two decades, BantUGent has developed such corpora for several Bantu languages in order to allow for their corpus-based (and in some cases even corpus-driven) study, both in terms of grammar and the lexicon.

BantUGent warmly welcomes scholars who want to do research using one of our existing corpora, or to build and examine a new corpus of their own (Bantu) language as part of a [doctoral](#) or [postdoctoral](#) research project.

Available Bantu corpora (in addition to corpora for Afrikaans, English, Hausa and Somali, which may be used for comparative purposes) are listed below.

De pest zat in het Congolese regenwoud

Zo'n 1.300 jaar geleden verdwenen haast alle menselijke nederzettingen uit het Congolese regenwoud. De oorzaak, meldt taalkundige Koen Bostoen (UGent) met een schare collega's in *Science Advances*, was wellicht een langdurige epidemie ten gevolge van een natte periode.

In die ongeveer dezelfde tijd voorzag de pest van Justinianus een ravage in de toenmalige Romeinse en Ethiopische rijken. Een pestvanger die vandaag nog in Centraal-Afrika voorkomt, is de oudste levende variant van de bacterie die in de middeleeuwen bij ons de zwarte dood veroorzaakte.

De studie steunde onder meer op

archeologisch en genetisch onderzoek. Uit taalkundige blik dat de huidige sprekers van Bantoe talen in de regio niet afstammen van de gemeenschappen die ongeveer 4000 jaar geleden het regenwoud koloniseerden.

Geograaf Veerle Vanacker (UCL) en haar collega's beschrijven in *Nature Communications* dat Noord-Amerika na de kolonisatie door de Europese opmars van landbouw, tien keer sneller erodeerde dan voordien. De laatste twee eeuwen al was de landbouw even groot als de voorheen drie millennia samen. Onder meer de ontbossing droeg daarmee bij.

Een variant van de pest joegde bewoners uit het Congolese regenwoud.

Una larga epidemia afectó a África hace más de 1.500 años

Un nuevo estudio elaborado por un equipo multidisciplinar de científicos podría reescribir la historia del poblamiento del continente africano. Los expertos aseguran que las poblaciones colapsaron entre el 400 y el 600 d.C., y no se recuperaron hasta hace unos 1.000 años.
